

a

PLM design and tag architectures

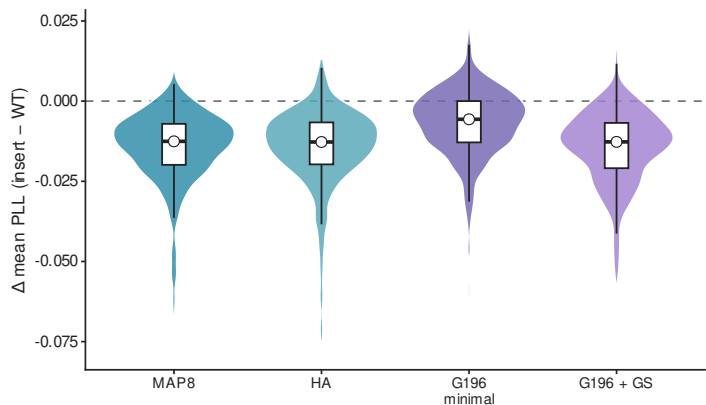

Global 4 × 320 tag-specific PLM landscape

c

Per-tag Δ mean-PLL distributions

Tag architectures shift score distributions; site ranking is therefore also considered within each tag.

d

Focal site × tag evidence matrix

Cell text = within-tag percentile; fill = absolute Δ mean PLL

	MAP8	HA	G196 min.	G196 + GS	F	S	Evo	EV-A
155 156 †	81%	41%	95%	65%				-6.0
203 204	35%	19%	8%	13%				-3.1
224 225	40%	6%	10%	4%				-3.5
248 249 ‡	74%	64%	80%	40%				-6.7
256 257 §	84%	95%	79%	60%				-6.5
287 288	58%	83%	57%	66%				-6.5
288 289	56%	76%	56%	68%				-6.2
289 290 ¶	54%	47%	45%	73%				-3.5
290 291	35%	43%	47%	44%				-6.2

† high PLM rank does not rescue a functional negative.
‡ same junction, tag-dependent compatibility.
§ PLM-favourable but biology-conflicted. ¶ moderate/tag-dependent, not a universal top site.
